

Development of Frequency Domain Multidimensional Spectroscopy with Applications in Semiconductor Photophysics

Blaise Thompson

University of Wisconsin–Madison

2018-04-23

The Wright Group focuses on the development and usage of coherent multidimensional spectroscopy (CMDS). CMDS is a family of related nonlinear spectroscopic experiments.

CON SPECTUS

Coherent multidimensional spectroscopy (CMDS) is now the optical analogue of nuclear magnetic resonance (NMR). Just as NMR heteronuclear multiple-quantum coherence (HMQC) methods rely on multiple quantum coherences, achieving widespread application requires that CMDS also excites multiple quantum

[DESCRIPTION OF FREQUENCY DOMAIN]

Most experiments are collected in the time domain

- ▶ fast
- ▶ robust

So... why frequency domain?
